

ABSTRACT OF THE DISCLOSURE

A recording medium having data recorded in a data structure capable of editing additional data related to audio data, a method and an apparatus for recording and/or reproducing thereof. The recording medium in which audio data is recorded in units of predetermined recording units and additional data related to the audio data is recorded in a predetermined location in the recording unit of the audio data makes recording/editing/reproducing of the audio data and the additional data related to the audio data easier. Therefore, a user can additionally record additional information such as a text in audio data, and can reproduce the additional information together with the audio data.
